

ebill Analysis | Solution Overview

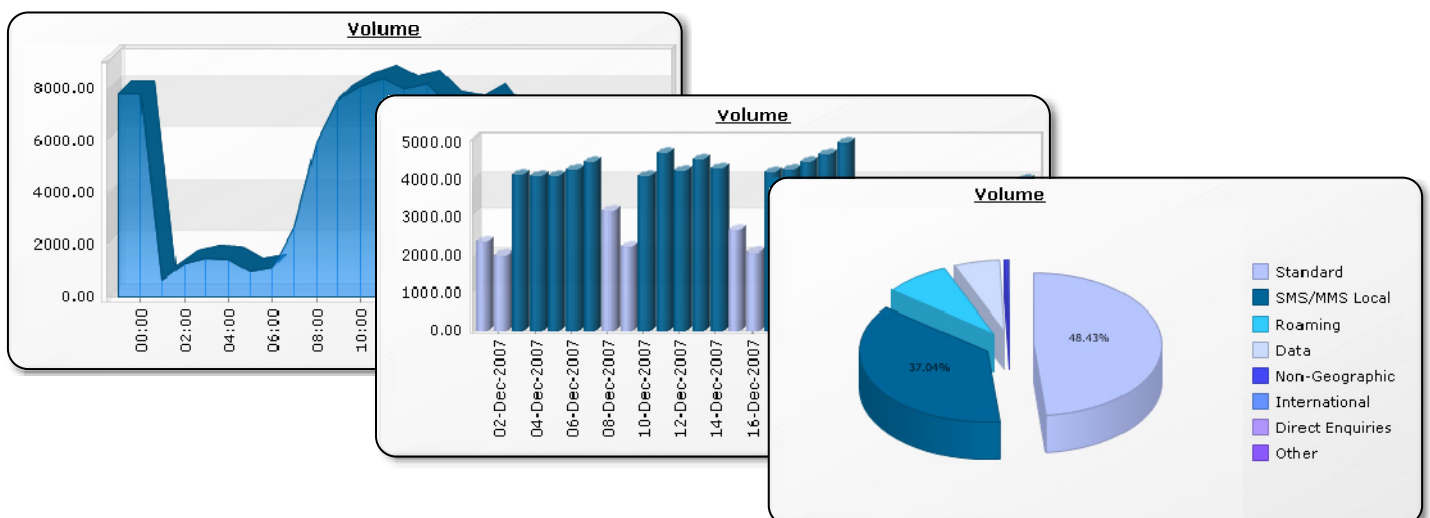

Manx Telecom's **ebill Analysis** is an advanced online billing solution, which automatically analyses the raw data behind your bills and presents this information to you through a feature rich, but simple-to-use, graphical interface. There are over 30 analytical reports included as standard, and an inbuilt wizard to create your own; all of which can be printed, downloaded or exported.

The solution can dynamically allocate costs from your bill, across your organisation, allowing multiple users to access department specific bill information. Employees can also use the system to view their own call details, and the functionality is provided to separate personal / business usage.

Through a secure and feature rich service, ebill Analysis eliminates the need for paper bills, helping to protect the environment. Perhaps best of all - it's available *free of charge*.

Key Customer Benefits

- Evolutionary online analysis and ebill presentment solution.
- Detailed analysis of your telecom usage, through a range of interactive 'views' including: dashboard summaries, interactive 3D charts and a wide range of instantly available reports.
- Save time and money through self-service.
- Unique 'dashboard' based navigation allowing instant summary overview of 'invoice', 'usage' and 'trend' functions leading to detailed report view.
- Powerful report generation, instantly formatting large amounts of data into cost, usage and duration reports.
- Cost allocation of spend across company structure / hierarchy, allowing all reports to be viewed at each level of the hierarchy; from top business level, to departmental structure, through to the fully detailed handset level (with instant drill down functionality).
- Gain detailed understanding of spend over time with powerful 'trend' functionality allowing trend analysis of each spend and usage variable (e.g. monthly SMS spend over 12 months).
- View your bills online or download as a PDF for your own records.
- Customised report builder to generate and save personalised reports.
- Instantly monitor specific handset call spend via personalised 'watch points'.
- Overview of key spend and usage activity.
- Instant drill down to individual call records, from each report view, allowing full detailed analysis.
- Multi-user access levels, allowing secure use across the organisation.
- Full export of reports and data is available for storage or use in other applications.
- Split Billing: filter out personal use from business calls and allow cost centre managers to control personal spend.
- Graphically rich reports can be viewed online or emailed to key stakeholders.

Summary: 1,861 16:16:15 £86.392

Handset	Label	Volume	Duration	Cost	Avg Duration	Avg Cost	Avg p/min	Breakdown of Volume
412345	Joe Bloggs	1,603	12:26:46	£77.196	00:00:27	0.05	0.10	86.1%
