

Overview:

Manx Telecom can design and install standards-based cabling solutions using high quality components.

Explained

The cable infrastructure in your office or building is a critical component of your entire network. A well designed, correctly installed, standards compliant, structured voice data cabling system (with a comprehensive warranty) is the best way of protecting your investment and catering for future needs.

Manx Telecom can assist with all your cabling needs; whether building a new location or upgrading your existing infrastructure.

Old Category 3, or even Category 5 cabling, may be causing speed issues within your network of which you are unaware. Manx Telecom cabling technicians can test the structured cabling in your building in order to give you expert advice on its condition and advise if any replacement is required.

We offer a full service; from site surveys and installations, through to completion and ongoing support.

Target Market

- Businesses; from new start ups to those upgrading or growing
- Businesses which want their cabling designed with the future in mind.

Features

- Structured cabling design and installation governed by a set of standards that specify wiring for data or voice communications, using category 5 (CAT 5E) or category 6 cable (CAT 6) and modular sockets
- Consultancy and solutions ranging from advice through to full turnkey options for complex multi-site networks
- Peace of mind that your service is being provided by company which has an extensive track record in providing cabling solutions
- Access to the highest number of locally-based, highly-qualified and experienced specialists.

Business Benefits

- Proper planning, design, installation, and maintenance of your cabling infrastructure can have a positive impact on your day-to-day operations, and can contribute to its reliability.

Why Manx Telecom
